

## SolarMax Energy Systems

# West African Photovoltaic Power Plant Energy Storage

Voltage range: 691.2-947.2V

>6000 cycles (100%DOD)

Rated battery capacity:  
216KWH (customizable)

EMS communication:  
4G/CAN/RS485

## Overview

---

Does West African region have a high potential for solar energy?

Table 3. Generation capacities in baseline scenario. West African region has a high potential of solar energy for the installation of solar PV plants as indicated by the 10 km × 10 km resolution of Global Horizontal Irradiance (GHI) data in Fig. 3 ( ECOWAS Observatory for Renewable Energy and Energy Efficiency, 2017 ).

How can solar energy help the West African Power Pool?

For the West African Power Pool keen on increasing electricity supply and reducing the current high electricity prices in the region, utilization of solar energy resources in combination with unexplored hydro resources provides an opportunity to achieve these goals.

Does integrating solar energy in a West African electricity network reduce load shedding?

For example, Gambia and Ghana increase their share of imports from 2% and 4% to 55% and 22% respectively. The results show that increasing integration of solar energy in a fully interconnected West African electricity network significantly meets growing demand, reduces load shedding and generation costs.

How much power does West Africa need?

In 2016, with a population of 327 million people and a maximum available generating capacity of 12GW, 14 out of 15 countries in the West Africa region had an estimated 25.6GW peak demand ( WAPP- Information and Coordination Centre, 2016 ).

Is there a gap between electricity supply and demand in West Africa?

This illustrates the current huge gap between electricity supply and demand in West Africa and is reflected in the frequent electricity outages and load

shedding experienced in each country. These outages have resulted in increased usage of diesel or petrol backup generators in domestic and industry sectors.

Is West African electricity demand growing?

Furthermore, electricity demand in West African countries is estimated to reach two times its present level by 2030 with an average annual growth rate of 6% ( International Energy Agency, 2014a ). There is an urgent need for sustainable strategies to meet the rapidly growing electricity demand in West Africa.
