

SolarMax Energy Systems

Western European Rural Photovoltaic Energy Storage

DISTRIBUTED PV GENERATION + ESS

Overview

Are rural areas a good source of solar energy in Europe?

Europe's rural regions present significant opportunities for solar energy development, with approximately 78% of the untapped solar potential located in these areas. These regions, which account for 83% of the EU's landmass, already contribute nearly three-quarters (72%) of Europe's renewable electricity production.

How can agrivoltaics help a climate neutral Europe?

Likewise, greenhouses can be made of semi-transparent PV panels. Agrivoltaics can help alleviate concerns about land competition between solar panels and farming activities, while supporting policies related to energy transition, agriculture, the environment and biodiversity in the EU's pursuit of the targets for a climate neutral Europe.

Could a 5% battery capacity ensure optimal integration of PV in Europe?

A 5% battery capacity level could ensure optimal integration of PV in Europe. The varying level of RES curtailment could be handled by 5% battery capacity. Country heterogeneity is observed in the optimal level of batteries. Batteries can ease the strong cannibalisation effect of PV plants.

Is battery energy storage a solution to Europe's energy crisis?

Europe is at the forefront of decarbonisation efforts, with already achieved results and ambitious goals for the coming decades, particularly in the power sector. However, the greening of the European electricity system also requires increasing flexibility . Battery energy storage systems (BESS) represent a crucial component of the solution.

Is battery storage a cost-efficient solution for PV generation?

One effective solution is the use of battery storage. Given the exponential growth in PV generation over the past years and its expected continued

growth, this article examines the optimal level of battery storage required to balance this growth in a cost-efficient way.

How many GWDC agrivoltaic systems are there in the EU?

The PV DC to AC conversion is approximately 1/1.25. At the end of 2022, the installed capacity in the EU was around 211 GWDC. According to the study, covering just 1% of the utilised agricultural area (UAA) with agrivoltaic systems could result in approximately 944 GW DC of installed capacity.
