What are the base stations for cluster communication

Overview

What is clustering based communication mode?

The clustering-based communication mode is considered as the most suitable communication mode for the wireless sensor networks. Clustering consists in selecting a set of cluster-heads from the set of sensor nodes and then regrouping the remaining sensor nodes around the cluster-heads.

What is a cluster based network?

The aim is to work efficiently like an infrastructure-based network and be appropriately managed by making topology less dynamic. In the cluster, a node responsible for Intra- and inter-cluster communication is known as cluster head, whereas the other nodes that share their data to cluster head for communication are called cluster members.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

How does clustering work?

Clustering consists in selecting a set of cluster-heads from the set of sensor nodes and then regrouping the remaining sensor nodes around the cluster-heads. The cluster-members send the data to the cluster-head that sends it back to the base station.

How do cluster-heads reduce the amount of data sent to the base station?

To reduce the amount of data to be transmitted to the base station, the cluster-heads aggregate the data received from the sensor nodes. In LEACH, the data is sent directly to the base station while in our protocol, it is sent

from cluster-head to cluster-head until the base station.

What is clustering in a CR network?

Clustering, which is a topology management mechanism, organizes nodes into logical groups (or clusters) in order to provide network-wide performance enhancement. Figure 2 shows an example of a cluster structure in which nodes in a CR network are grouped to form clusters.

What are the base stations for cluster communication

Star Topology in IoT Networks: How Sensor Devices Connect via ...

1 day ago · Learn how IoT sensor devices use star topology with local gateways to connect to base stations, enabling scalable, low-power, and reliable communication.
