What are the large energy storage power stations in Venezuela

Overview

What is the largest hydroelectric power station in Venezuela?

Venezuela's largest hydroelectric power station, Guri (Simon Bolivar), is among the ten largest hydroelectric power stations in the world, with a capacity of 8850 MW . In Figure 7, you can see the main facilities of the Venezuelan infrastructure for the production of energy from renewable sources. Figure 7.

What is the energy consumption of Venezuela in 2023?

However, this trend has not yet been developed to any significant degree in the country. Primary energy consumption in Venezuela in 2023 amounted to 2.53 exajoules and was dominated by natural gas – 42.3%, followed by oil – 33.2%, hydropower – 24.1%, and coal – 0.4% . Venezuela is one of the world's largest oil producers and exporters .

How much natural gas does Venezuela produce in 2023?

According to in 2023, Venezuela produced 842 Bcf of natural gas, and consumed the same amount of 842 Bcf . This is also confirmed the Energy Institute Statistical Review of World Energy 2024, according to which in 2023 the average volume of natural gas production was 29.7 Bcm, while consumption was also 29.7 Bcm . Figure 2.

What is the production and consumption of fossil fuels in Venezuela?

The production and consumption of fossil fuels in Venezuela (coal — left, gas — in the center, oil — right) Coal production has decreased over the past 15 years, and in 2023 was 0.16 million short tons, while consumption was 0.09 million short tons . Historically, Venezuela has a high share of hydropower in electricity production (Fig. 3).

How much solar power will Venezuela have in 2023?

In early 2023, Venezuela's Ministry of Electricity announced a new plan to

install 2,000 megawatts (MW) of solar power over the next three years. Construction would begin with 500 MW in the states of Zulia, Falcon and Lara, followed by second and third phases that would cover states in the center and west of the country.

How much coal does Venezuela have in 2023?

Coal reserves in Venezuela in 2023 were estimated at 806 million tonnes . A selection of basic indicators of this type of resource is presented in Table 2. The level of solar radiation is low (5.5-6.0 kWh/m²/day) and scattered over most of the country.

What are the large energy storage power stations in Venezuela

Building a large energy storage power station

What are the benefits of energy storage power stations? Energy storage stations have different benefits in different scenarios. In scenario 1, energy storage stations achieve profits through ...
