What is the power of the base station backup power supply

Overview

The Power-Pac offers peace of mind for the system designer or base station operator. This unique power supply assures that a base station can remain up and running to power communications when it is.

What is a power supply and backup battery system?

Overall, the power supply and backup battery system provide both AC line power and DC battery backup power to ensure the base station remains powered when AC line power is disabled. Figure 4 shows the circuit blocks of the power supply and backup battery system. Figure 4. Power supply and backup battery system block diagram.

What does a base hub do during a power outage?

During a power outage, the Base hub disconnects your home from the grid. This ensures that the stored energy in your battery powers only your household. Learn more about the components of your battery system below, in the section "What's inside your Base battery system." The average power outage in Texas lasts 2.5 hours.

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

How does a base battery work?

This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners. The charge level of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle.

How long does back-up power last?

Provision is made for expanding back-up power up to twelve hours (in this example - longer under lesser loads), with the installation of additional externally wired batteries (total 28 amp/hours max.). Batteries are automatically recharged when AC is restored.

How does a macro base station work?

In a macro base station application, input protection, rectifier, and filter convert the AC input to DC. Since it interfaces with the AC line, it needs the full suite of overcurrent and overvoltage transient protection.

What is the power of the base station backup power supply
