

SolarMax Energy Systems

**Which company is the green
base station company**

Overview

Does Ericsson have a 'green' base station design?

But the large equipment vendors too have got in on the act. Ericsson made a point of its green credentials at the recent Mobile World Congress, and launched a "green" base station design back in 2007. Its commitment extends from materials used in base station build, to the design and efficiency of the base stations themselves.

What is a green base station?

Another feature of the green base station concept is its ability to create value during ordinary times as well, by controlling the supply of power from appropriate power sources according to conditions and reducing use of commercial power, thus contributing to environmental protection.

What is the difference between green base stations and conventional base stations?

The differences in configuration between conventional base stations and green base stations are different storage batteries (from lead batteries to LIB), the use of ecological power generation, and the addition of equipment to control them.

What is a green base station test system?

Environmentally-Friendly, Disaster-Resistant Green Base Station Test Systems, which are radio base stations with environmentally friendly, disaster resistant energy systems.

How can a base station save energy?

That means each base station can help operators save up to 5700 kilowatt hours of electricity each year, which is equivalent to reducing the carbon dioxide emissions of 1.7 tons of coal.
